

DESCRIPTION:

The MM 5018 amplifiers are two-channel switching amplifiers with relay output, equipped with an LFD circuit for control of the lead loop (interrupt, short circuit), with line fault indication by an LED. The input circuits correspond to DIN 19234 (NAMUR) for the connection of magnetic, inductive or capacitive sensors, variable resistors or voltage-free mechanical contacts. The amplifier output is equipped with two output relays. Connecting the sensor according to the diagram on the side of the product switches the output relay to the operating current sensor mode. If the output relay is requested to be switched on in the sensor's quiescent current mode, it is necessary to provide the corresponding code when ordering (see technical data). The presence of the supply voltage is indicated by a green LED, the activation of the output relay is signaled by a yellow LED. An emergency status is indicated by a red LED

PRODUCT FEATURES

- Two-channel switching amplifier
- intrinsically safe entrance
- input circuit according to DIN 19234 (NAMUR)
- galvanic separation of input and output circuits
- galvanic separation of the supply voltage from the input and output circuits
- Line Damage Indication

CONNECT:

- 3 - switching contact of relay 1
- 4 - center of relay 1
- 5 - switching contact of relay 2
- 6 - center of relay 2
- 13 - + In 1 (input)
- 14 - - In 1 (input)
- 15 - + In 2 (input)
- 16 - - In 2 (input)

Intrinsically safe relay (switching amplifier)

Dual-channel, output 2x relay contact, line
fault detection
