

DESCRIPTION:

The intrinsically safe isolation amplifier is designed for galvanic isolation of the measurement signal from the processing equipment. The MM 5044 includes a fully floating power source designed to power and transmit analog signals from two-wire transducers with a 4-20 mA analog output. Its design complies with the European standards EN 60079-0/60079-11. The amplifier is placed in a plastic housing adapted for mounting on a DIN 35 rail.
